

Applied Methods in Transport Planning Programme Committee

Call for Papers

Deadline: 5 February 2010

The focus of this committee is on transport modelling and simulations and appraisal methods.

Both abstracts on best practices and abstracts that elaborate on, or compare existing methodology will be welcomed.

The focus for ETC 2010 will be on transport and climate change and sustainability issues. Abstracts in this field are therefore encouraged.

The following list gives an overview of topics that are relevant for this committee:

- multi-modal models for short-run and long-run planning
- national and regional models in different development phases
- land use/transport models
- the use of microsimulation and other dynamic assignment methods
- assessment of ITS systems
- activity-based models, household microsimulation
- models of freight transport in a multimodal context
- updating, transferring and combining of models
- model validation studies
- Before and After studies
- regarding uncertainties in applied modelling
- data collection and use of (panel) data
- soft factors in transportation models
- the role of quantitative methods in the policy making process
- economic and environmental assessment and integrated appraisal methods
- value of time and other drivers of transport choice behaviour
