

Innovative Methods in Transport Analysis, Planning and Appraisal Programme Committee

Call for Papers

Deadline: 5 February 2010

The focus of this committee is on the development and application of novel methodologies. Contributions will generally be expected to have a strong methodological component.

The following list gives an overview of some topics of particular interest, noting that this list is not exhaustive:

- Innovative applications of transport choice modelling
- Using new sources of evidence to improve transport models
- Random utility models with latent variables
- Advances in dynamic traffic assignment
- Methods for modelling externalities (emissions, safety, noise, etc)
- Optimal network design
- Evacuation modelling
- Travel reliability and robustness
- Model validation studies
- Modelling with panel data
- Time of day choice in strategic (i.e. equilibrium) models
- Travel time variability
- Congestion, trip timing and equilibrium
- Influence on choices by provision of additional information or group dynamics
- Transportation supply design
- Day-to-day dynamics
